Solution for Assignment 7

Due date: 10 December 2018, 23:55

Graph Partitioning

In this assignment you will implement various graph partitioning algorithms in Matlab and test these methods on a variety of 2D meshes.

1. **Install METIS 5.0.2, KaHIP 2.0, and the corresponding Matlab mex interface** *(10 Points)*

2. **Implement various graph partitioning algorithms in Matlab** *(40 Points)*

Table 1. Edge-cut Results

Mesh	Coordinate	Metis 5.0.2	KaHyPar	Spectral	Inertial
grid5rec(8, 80)	8				
grid5rec(80, 8)	8				
gridt(20)	28				
grid9(30)	88				
small	25				
Tapir	55				
Eppstein	42				
Airfoil	94				
cockroach(60)	2				

3. Visualize the graph partitioning *(10 Points)*

4. Implement in Matlab the recursive k-way partitioning *(10 Points)*

Table 2. Edge-cut results for k-way partitioning and the airfoil mesh.

Mesh	Coordinate	Metis 5.0.2	KaHyPar	Spectral	Inertial
k=2					
k=4					
k=8					
k=16					
k=32					

5. Partitioning of realistic large-scale FEM meshes *(30 Points)*

Table 3. Results for 2-way partitioning of the selected FEM mesh.

Metric	Metis 5.0.2	KaHyPar
Time (s)		
Partition 1		
Partition 2		
Edge cut
